

ST Trackparts

Seat console install guide

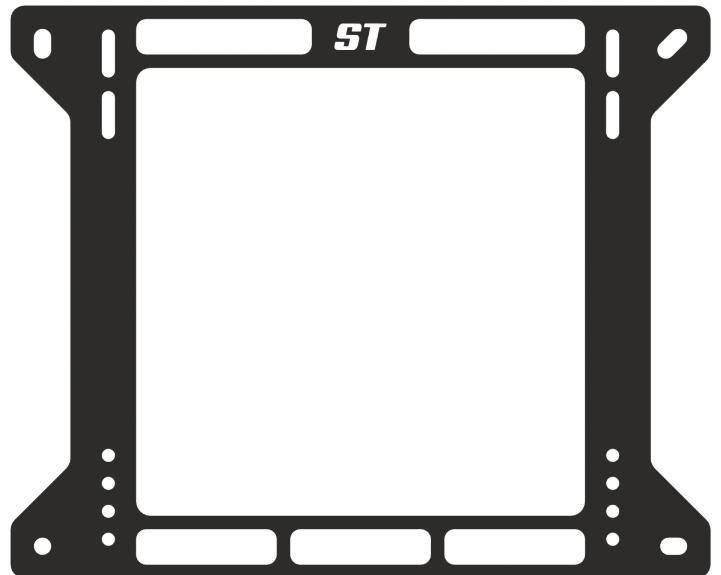

1. Orientation

Make sure that the taller side of the side brackets points to the front of the car.

Driver side (left)

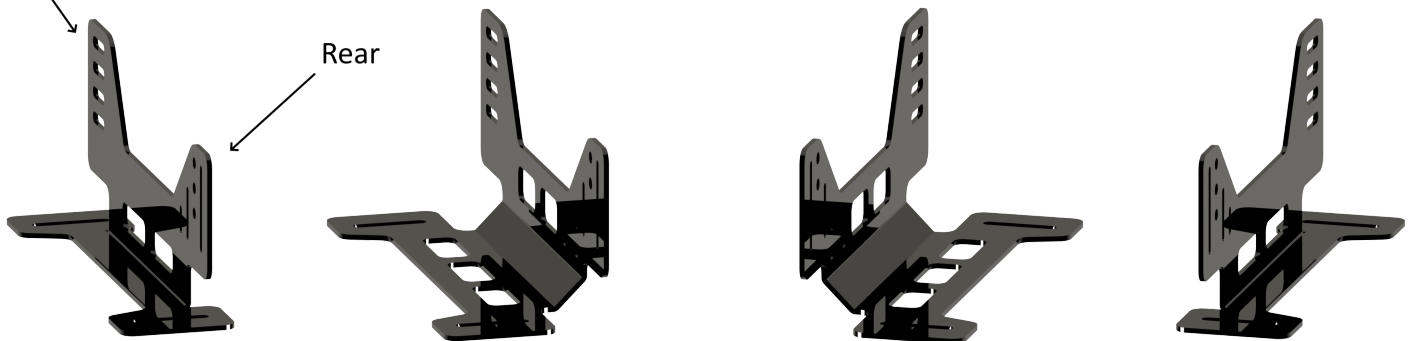

Passenger side (right)

Front

Rear

2. Install the sliders onto the base plate with the flat side up and the pins pointing to the inside.
3. Use the larger M8 washers and locking nuts on the backside of the base plate to secure the sliders.

4. Install the side brackets onto the sliders. Use the M8 hex bolts with a normal washer on the underside, and secure them with the larger washer and locking nuts on the topside of the bracket. Move the sliders for easier access. Leave the side brackets slightly loose for the next step.

5. Install your seat onto the brackets using the button head bolts with a washer. Leave the brackets slightly loose such that the seat can slide side to side.
6. Install the seat frame including your seat into your car, choose your desired seating position and tighten the brackets.

Enjoy!
